**The assumptions and methodology used to calculate H.A.R.'s Housing Affordability Index:**

- Step 1.** Median Home Sales is based on the Humboldt Association of Realtors Multiple Listing Service data and reflects the median price of single family homes sold, broken down on a monthly basis.
- Step 2.** Annual Mortgage Rate is derived using the National Average Effective Mortgage Rate on all fixed and adjustable rate mortgages closed for the purchase of previously occupied homes as reported by the Federal Housing Finance Board.
- Step 3.** Median Household Income is taken from the US Census data for Humboldt County with an annualized increase based upon the previous 10 year annualized growth rate.
- Step 4.** Monthly Payment is derived by calculating a 20 percent down payment on the median priced home and amortizing the loan amount, 80 percent, over 30 years for a total principal and interest payment.
- Step 5.** Property taxes are assumed to be 1 percent of the median home sales price, which is divided by 12 for a monthly amount. The monthly amount is then added to the principal and interest payment.
- Step 6.** Insurance is then calculated by taking 0.35 percent of the median home sale price and dividing by 12 for a monthly insurance amount. The monthly amount is then added to the principal, interest, and insurance figure for a total monthly payment.
- Step 7.** It is assumed that in order to qualify for financing, the total monthly payment (PITI) can not exceed 30 percent of the total monthly income. The PITI payment is annualized (multiplied by 12). The total annualized payment is divided by 0.3 which gives the annual qualifying income.
- Step 8.** The total monthly payment (PITI) required in order to qualify for a Median Price Home in Humboldt County is divided by the monthly Median Household Income (annual figure divided by 12). This represents the percent of Median Income needed for a house payment. As stated above, it is assumed that 30 percent or lower qualifies and above 30 percent does not qualify for purposes of financing. However, it is understood other factors are involved in qualifying.
- Step 9.** The actual affordability index is derived by using the US Census figures and calculating the total number of households at the qualifying income and dividing it by the total number of households in Humboldt County. This gives the percentage of households in Humboldt County that would be considered qualified under the above guidelines for a Median Price Home.
